

# Spanish Network of Agencies for Health Technology Assessment and Services of the National Health System (RedETS)

Contributing to an Innovative, Quality and Sustainable Health System

RedETS is a key **scientific-technical advisory** body for the Spanish **National Health System (SNS)**. It develops an **independent, participatory and transparent evaluation** with a **common methodological framework**.

## 1 WHO WE ARE

The **Network** is made up of the **agencies and units of the General State Administration** and the **Autonomous Communities** that work under the principle of **mutual recognition** and **cooperation** through **networking**.

## 2 WHAT WE DO

We provide **information** to support **decision-making** at the various levels of the SNS through the **evaluation** of non-pharmacological **health technologies** throughout their life cycle.

We promote **the culture of evaluation** for its effective incorporation into healthcare management and daily clinical practice in the SNS.

We respond efficiently through **cooperation** between the **various health technology assessment agencies and units** in Spain through **networking**.

## 3 HOW WE WORK

We rely on rigorous, quality scientific information through non-pharmacological health technology assessment reports, clinical practice guidelines and other evidence-based products, new and emerging health technology detection and monitoring studies.

We integrate the various players and stakeholders of the health system into the network processes.

We are aligned with the priorities of the SNS and the health needs of the population.
